William IV antique silver teapot
John Walton

Sold

REF: 7556

Height: 150 mm (5.91")

Width: 200 mm (7.87")

Weight: 441 g

Description

Antique silver teapot from the William IV era in the early 19th century. The charming panelled body is surmounted by a domed and fluted cover with bun-and-bead detachable finial. The teapot features an elegant, fluted, swan-neck spout, an insulated handle and is mounted on a collet base. The teapot serves approximately four or five cups of tea and pours perfectly.

A silver teapot pours like no other and sterling silver is the perfect material for fashioning teapots:

- No other material can be fashioned into such elegant and detailed forms, reflect light as beautifully, and a perfectly formed silver teapot spout will never drip.
- Second only to diamonds, silver has the highest thermal conductivity of any material, meaning that tea leaves can be brewed at a higher temperature than in any other teapot, allowing the tea leaves to fully release their flavours.
- That same high thermal conductivity means a silver teapot will retain heat and keep tea hot for much longer.
- Unlike porcelain and ceramic teapots, silver is sturdy and long-lasting, does not shatter and the occasional dent can be deburred.
